

# 计算机网络大作业---制作网页

樊恭杰荣誉学院 18021006 吴天鹤

## 前言:

本次网页的制作的主题内容是 **Programming Language**, 制作一个集合现有编程语言的网页。在制作过程中不仅学会并运用老师所讲解的 **html** 知识, 同时又自学了额外一些 **html/CSS** 知识(例如在制作网页过程中用到了面向对象的思维, 将属性进行封装, 并运用), 配合着完成本次的大作业, 老师讲解的第三章的功能也全都运用上了, **title**, **<hr>**, 表格, 超链接, 字体设置, 颜色变换。这也是我第一次自己写前端, 感受还是挺多的。由于时间有限, 这次制作的内容为 3 个, 主网页, **C** 网页, **Java** 网页。可以通过主网页点击 **C** 和 **Java** 字样链接到自己制作的 **C** 网页, **Java** 网页。

## 主网页 **html** 代码:

```
<html>
<head>
<title>Programming Language</title>

<style type = "text/css">
.header {
    background-color: black;
    color:white;
    text-align:center;
    padding:5px;
}

.mode1 {
    background-color:#666666;
    color:white;
    height:120px;
    width:180px;
    text-align:center;
    float:left;
    margin:7px;
    padding:40px 20px 20px 20px ;
}

.mode2 {
    background-color:#666666;
    color:white;
    height:120px;
    width:180px;
    text-align:center;
    float:left;
    margin:7px;
    padding:40px 20px 20px 20px ;
}
```

```
.mode3 {  
    background-color:#666666;  
    color:white;  
    height:120px;  
    width:180px;  
    text-align:center;  
    float:right;  
    margin:7px;  
    padding:40px 20px 20px 20px ;  
}
```

```
.mode4 {  
    background-color:#666666;  
    color:white;  
    height:120px;  
    width:180px;  
    text-align:center;  
    float:right;  
    margin:7px;  
    padding:40px 20px 20px 20px ;  
}
```

```
.mode5 {  
    background-color:#666666;  
    color:white;  
    height:120px;  
    width:180px;  
    text-align:center;  
    float:left;  
    margin:7px;  
    padding:40px 20px 20px 20px ;  
}
```

```
.mode6 {  
    background-color:#666666;

<h2 style = "color:#000000">Introduction</h2>
<p align = left style = "font-family:Cambria">Java is a general-purpose programming language
that is class-based, object-oriented, and designed to have as few implementation
dependencies as possible. It is intended to let application developers write once, run
anywhere (WORA), meaning that compiled Java code can run on all platforms that support
Java without the need for recompilation.
```

Java applications are typically compiled to bytecode that can run on any Java virtual machine (JVM) regardless of the underlying computer architecture. The syntax of Java is similar to C and C++, but it has fewer low-level facilities than either of them. As of 2019, Java was one of the most popular programming languages in use according to GitHub, particularly for client-server web applications, with a reported 9 million developers.</p>

```

```
<div class = "J2">
<h2 style = "color:#000000">History</h2>
<p align = left style = "font-family:Cambria">James Gosling, Mike Sheridan, and Patrick
Naughton initiated the Java language project in June 1991. Java was originally designed for
interactive television, but it was too advanced for the digital cable television industry at the
time. The language was initially called Oak after an oak tree that stood outside Gosling's office.
Later the project went by the name Green and was finally renamed Java, from Java coffee, the
```

coffee from Indonesia. Gosling designed Java with a C/C++-style syntax that system and application programmers would find familiar.

Sun Microsystems released the first public implementation as Java 1.0 in 1996. It promised Write Once, Run Anywhere (WORA) functionality, providing no-cost run-times on popular platforms. Fairly secure and featuring configurable security, it allowed network- and file-access restrictions. Major web browsers soon incorporated the ability to run Java applets within web pages, and Java quickly became popular. The Java 1.0 compiler was re-written in Java by Arthur van Hoff to comply strictly with the Java 1.0 language specification.

With the advent of Java 2 (released initially as J2SE 1.2 in December 1998 – 1999), new versions had multiple configurations built for different types of platforms. J2EE included technologies and APIs for enterprise applications typically run in server environments, while J2ME featured APIs optimized for mobile applications. The desktop version was renamed J2SE. In 2006, for marketing purposes, Sun renamed new J2 versions as Java EE, Java ME, and Java SE, respectively.
